Abstract

Write a self-contained abstract here. It is typeset independently by arXiv, so it must not contain cross-references, footnotes, or hyperlinks. State the problem, the approach, the main result, and its significance in a few sentences.

1 Introduction

Motivate the problem and state the contribution of this whitepaper. Context, related work, and definitions needed by the rest of the document appear in the background section that follows.

2 Background

Describe the setting: prior art, notation, and the precise problem statement the method addresses. Keep definitions explicit so later sections can rely on them.

3 Method

Describe the approach. Equations, algorithms, and formal definitions belong here. Each claim should

map to the evaluation in the next section.

4 Evaluation

Report results with figures and tables. Caption every float, reference every figure from the text, and state the experimental conditions used.

5 Discussion

Interpret the results, note limitations, and outline future work. This section is where trade-offs and open questions are made explicit.

6 Conclusion

Summarize the contribution and its implications in a few sentences.
